

# Lawrence Livermore National Laboratory

## *Environmental Protection Department*

March 10, 2004

Dear Site 300 Neighbor:

This is to let you know there will be a public workshop on the environmental restoration of Lawrence Livermore National Laboratory's Site 300 focusing on the alternatives for cleaning up the Pit 7 Complex. This is an area with a number of pits where years ago waste from site explosives testing was placed. Contaminants have been found in nearby groundwater onsite. There are no signs that contamination from the Pit 7 Complex have migrated in ground water or other environmental media outside the Site 300 property.

The meeting will start at 6:30 PM on Thursday, March 18<sup>th</sup> and will be held at the Tracy Community Center, 300 East 10<sup>th</sup> Street in Tracy, California.

The purpose of this meeting is to provide you with a brief progress report on the environmental restoration of Site 300 and to obtain your views on the alternatives to address contaminants at the Pit 7 Complex.

Please let me know if you have any questions. You may contact me by e-mail at [heffner1@llnl.gov](mailto:heffner1@llnl.gov) or call me at (925) 424-4026.

Sincerely,

Bert Heffner, Manager  
Environmental Community Relations  
Lawrence Livermore National Laboratory
